

The **Reaction** Housing System

The Reaction Housing System is a rapid response, short-term housing solution.

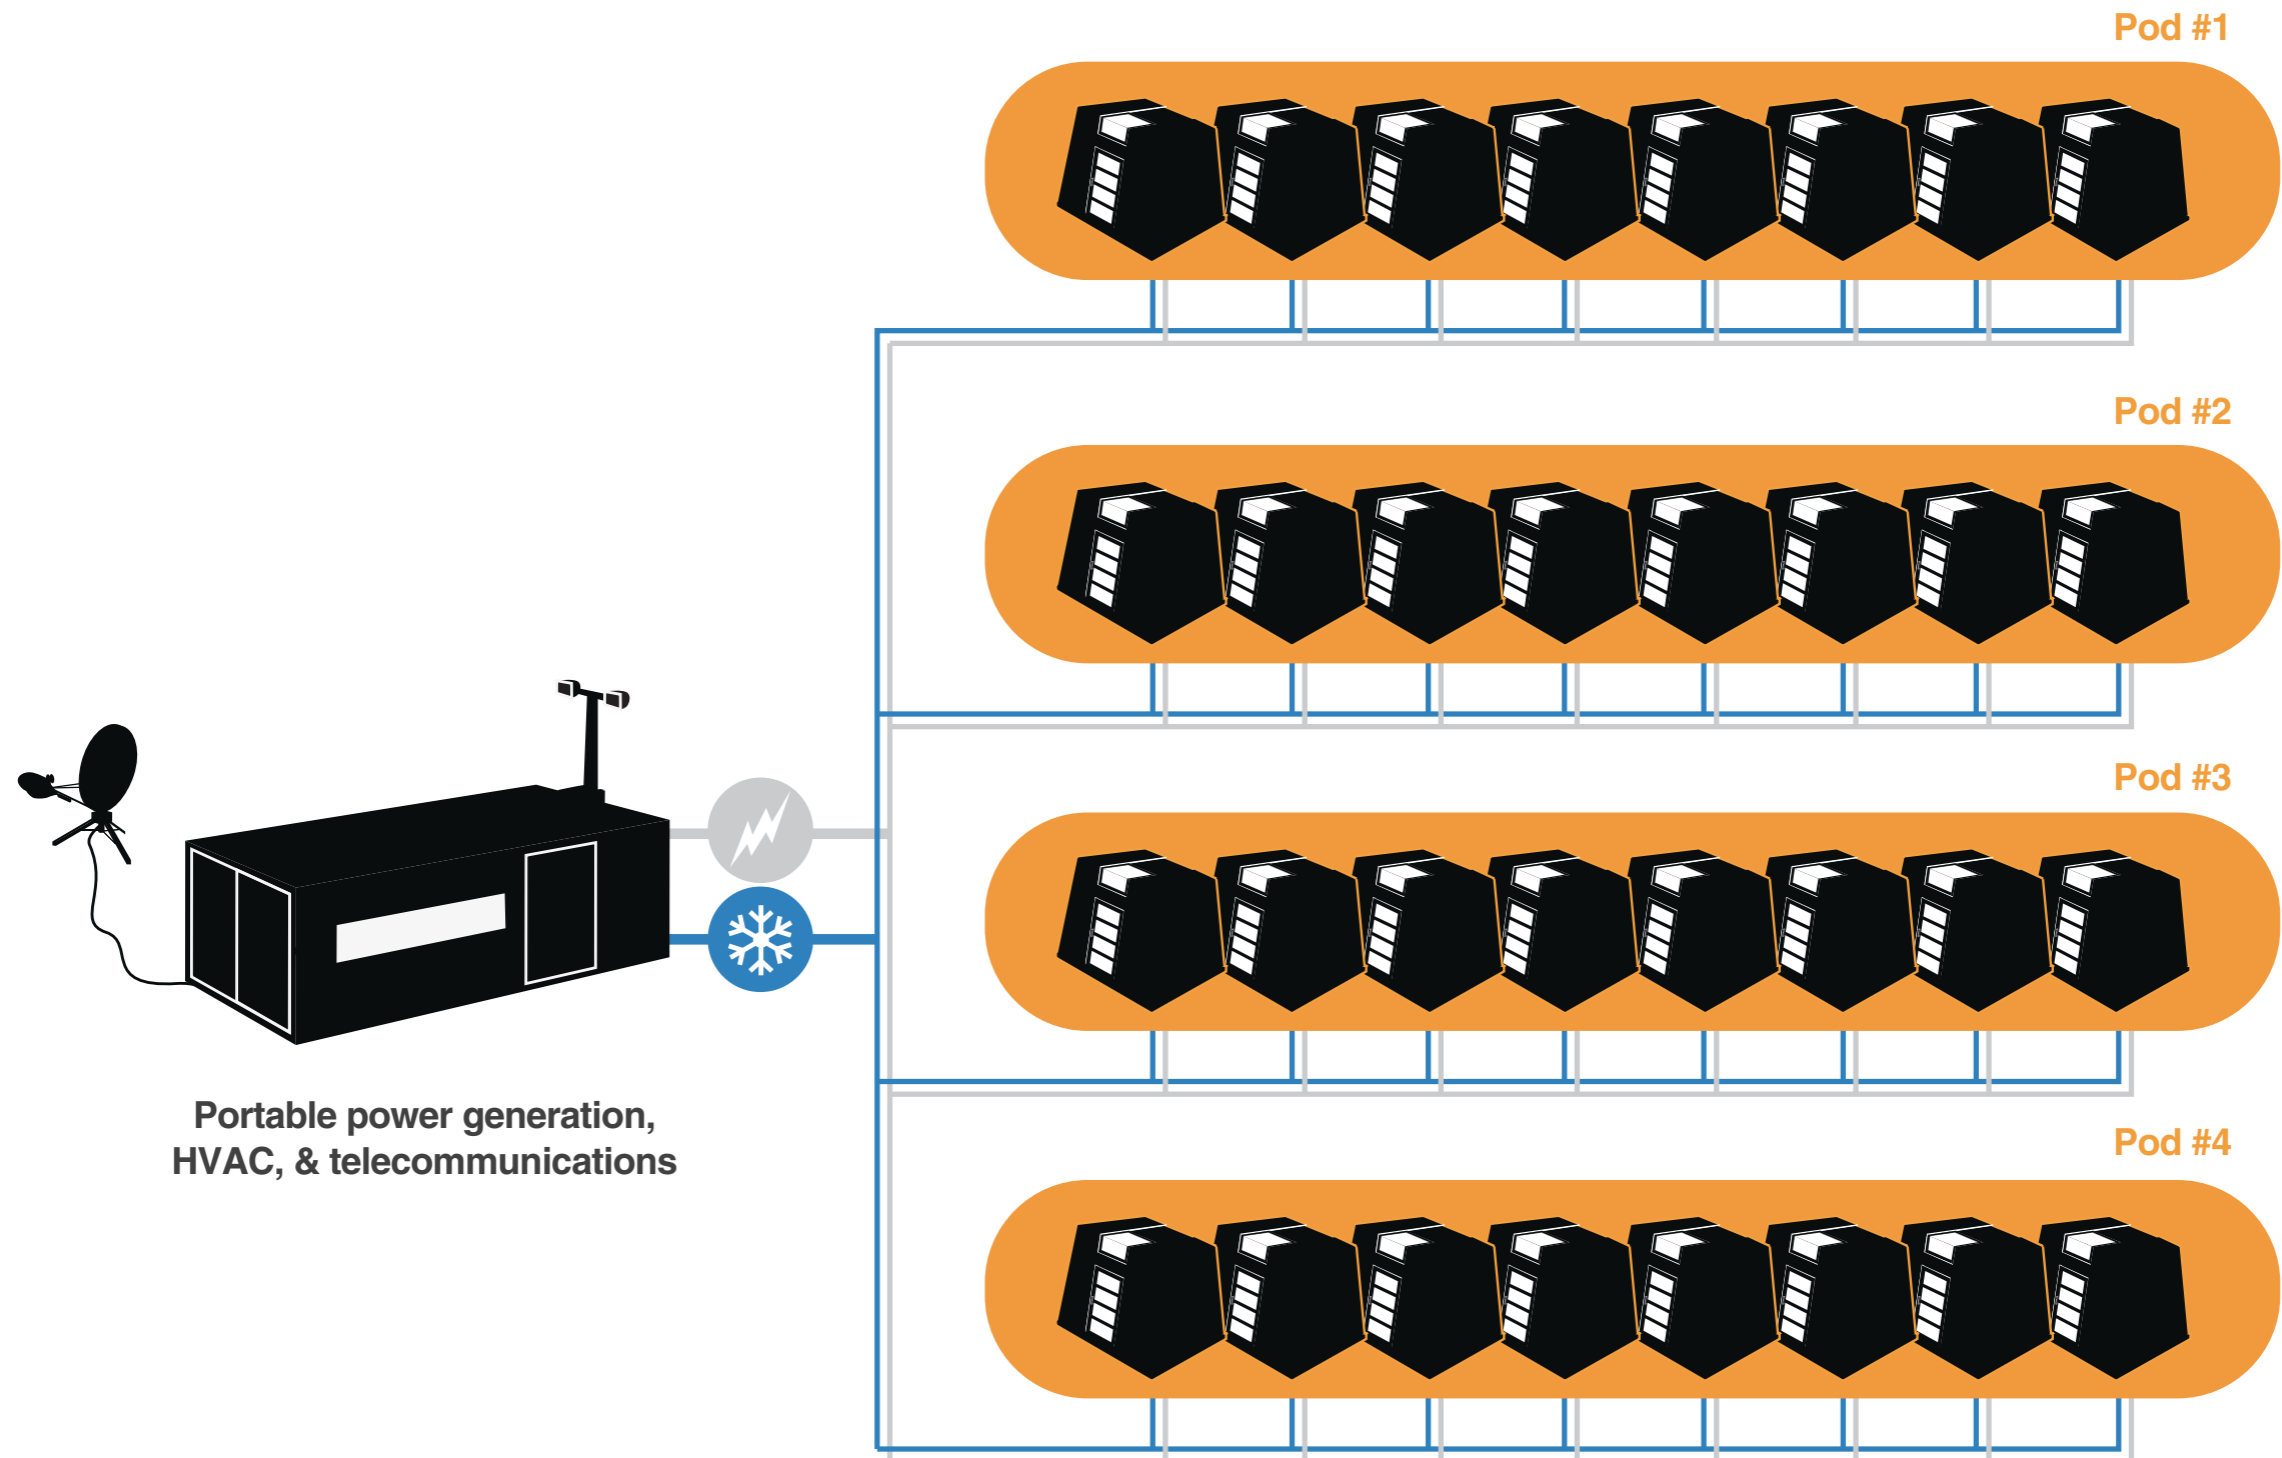

The core system components flat pack to provide extremely efficient storage and transportation. The system can be deployed within hours of an event without the need for tools or heavy machinery.

Sample Mass Deployment

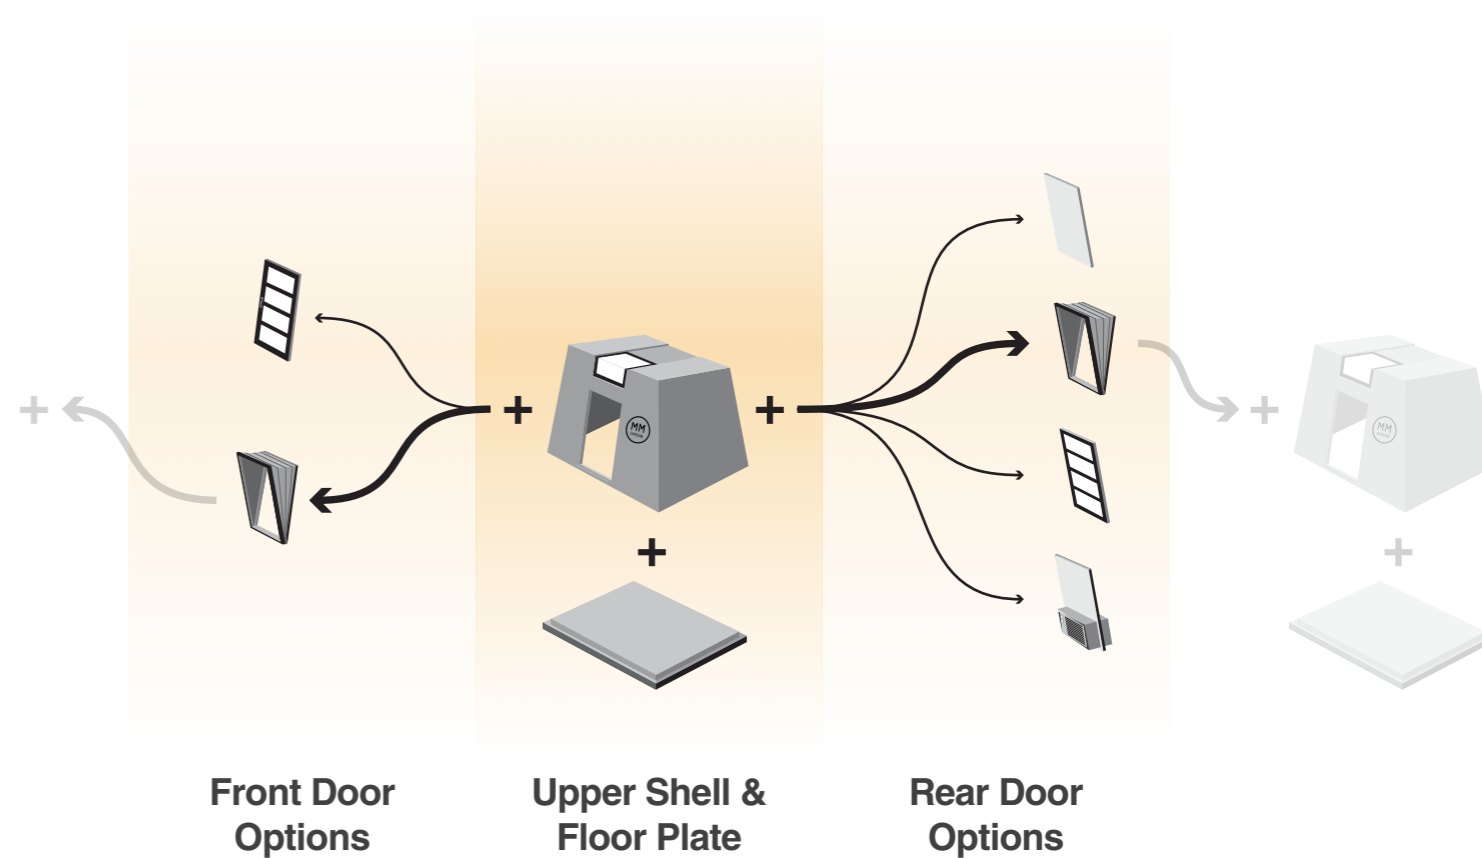

Mass Deployment Infrastructure

The Exos provide living/sleeping quarters but are augmented with other system components such as portable power generators, climate control equipment, sanitation facilities, walkways, and canopies for common areas.

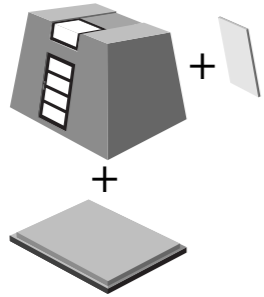

The Exo Shelter Unit

The Exos are base housing units that make up the foundation of the Reaction housing system. They provide private living and sleeping quarters for a family of four within a climate-controlled environment.

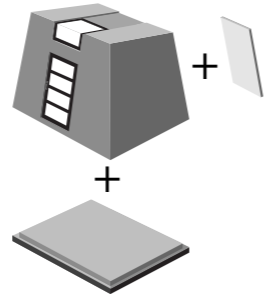

Exo Configurations

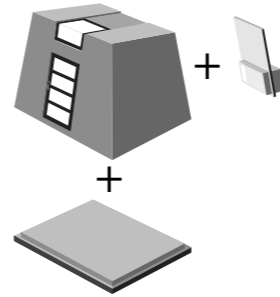

The Exo's design allows for numerous configurations to meet any need or deployment condition.

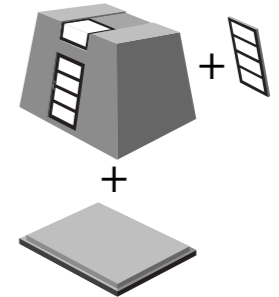

Standard Living Configuration

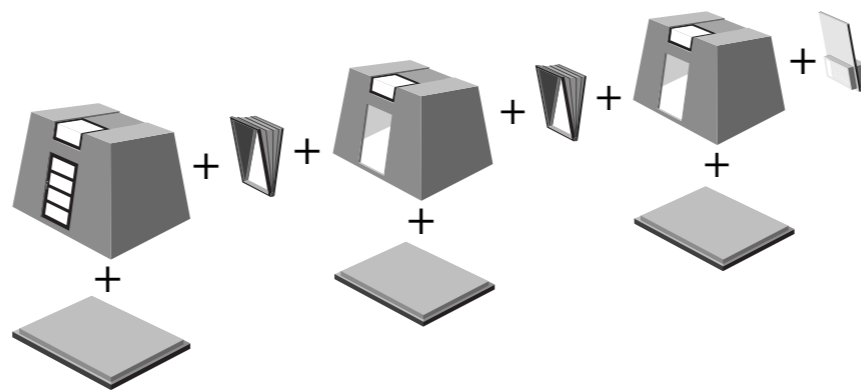

Small Office Configuration

Individual HVAC Configuration

Double Door Configuration

Interconnected Configuration

Transportation

Exo Transportation Figures

C-5 Galaxy

100 | Exos per load
400 | People housed

Cargo Ship

300,000 | Exos per load
1,000,000 | People housed

C-130 Hercules

20 | Exos per load
80 | People housed

Freight Train

1,940 | Exos per load
7,760 | People housed

CH-47 Chinook

20 | Exos per load
80 | People housed

Semi Truck

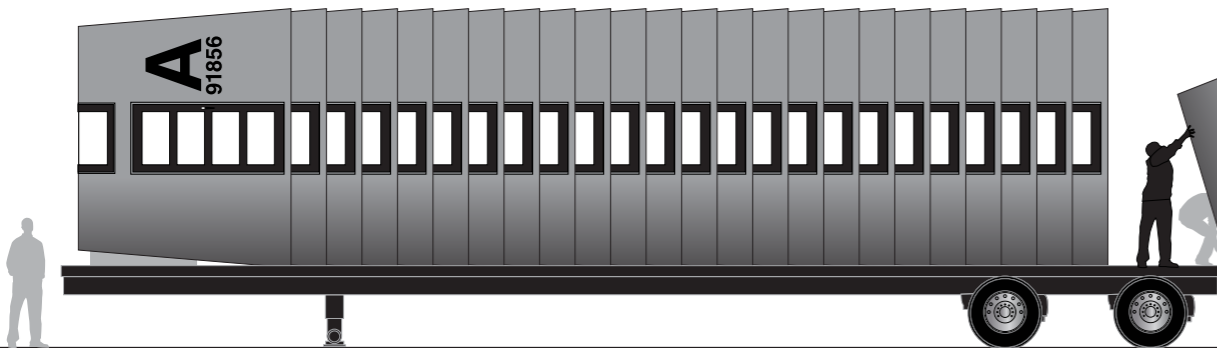

20 | Exos per load
80 | People housed

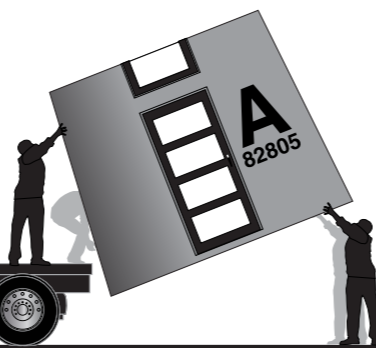

Exo Setup

There's virtually no assembly required with the Reaction Housing System. An Exo shelter unit is transported in two pieces – a base (floor) and an upper shell (walls and roof) that simply latch together at a deployment site. A small team of 4 people can easily move and assemble a single Exo shelter unit in well under two minutes with no tools or machinery needed.
